ABOUT ME

I build software that helps shipping companies keep their fleets safe. At Orca AI I work across the whole stack of FleetView, the fleet-safety platform used by ship owners and operators: an Angular 20 web and mobile app, Python and NestJS microservices on PostgreSQL and Snowflake, and AWS pipelines.

Over the last two years I have owned features end to end, from product spec and design review to backend schema, API, UI, release and QA follow-up. Highlights include an LLM-powered natural-language search assistant, AI-generated analyses of close-encounter events, a custom Mapbox GL + deck.gl port-operations map with vessel playback, GPS-spoofing alert notifications, and the migration of the whole front end to a new design system.

I care about developer experience as much as product: I migrated the test suite from Karma to Jest, upgraded Angular across major versions, and rebuilt the GitLab release pipeline with automated versioning, changelogs and Slack notifications. In parallel I founded Matso, a multi-tenant personal and business finance platform for the Greek market, which I build solo end to end.

Computer Engineering graduate of the National Technical University of Athens. Based in Athens, working with a distributed team in Tel Aviv.

WORK EXPERIENCE

Orca AI

City: Tel Aviv (Remote) | Country: Israel

[01/11/2024 - Current]

Senior Full-Stack Engineer

Full-stack engineer on FleetView, Orca AI's fleet-safety platform for shipping companies. Own features end to end: ~1,000 commits in the dashboard, ~250 across backend repos, 120+ Jira tickets delivered.

- Designed and built the company-wide MMSI-updates orchestrator (Python, Kubernetes): replaced a manual, error-prone process spanning five teams with a single pipeline with row-level backups, rollback, verification and Firebase user updates; used for every production fleet migration.
- Built the AI Search Assistant: natural-language prompts turned into Events page filters via an OpenAI-backed NestJS service; led the accuracy/performance sprint that closed 35+ QA tickets.
- Replaced the Kepler.gl port-events map with a custom Angular + Mapbox GL + deck.gl map: vessel playback, heading/course arrows, ENC nautical charts, downloadable standalone maps.
- Shipped GPS-spoofing alert notifications end to end: rules UI, AWS Lambda/SQS

processors, email templates, Terraform.

- Delivered per-fleet Master View configuration for captains: PostgreSQL schema, Python API, Angular admin screen, mobile parity.
 - Built Events page search (backend OR filter, highlighting, URL date filters), event labels with privacy, favorites, presets, Voyages V2 and safety-score charts.
 - Led the new design system rollout: shared Angular component library with Storybook and SCSS tokens across web and mobile.
 - Upgraded Angular 16 → 20, migrated Karma to Jest, added pre-push lint gates, and rebuilt the GitLab release pipeline with automatic versioning, changelogs and Slack notifications.
 - Authored an internal NestJS Snowflake adapter (pooling, OAuth/SSO, 96% coverage).
- Stack: Angular, TypeScript, RxJS, NgRx, NestJS, Python, PostgreSQL, Snowflake, Mapbox GL, deck.gl, AWS, Kubernetes, Terraform, GitLab CI, OpenAI API

Matso.app (self-employed)

City: Athens | **Country:** Greece

[01/02/2024 - Current]

Founder & Principal Engineer

Building Matso, a multi-tenant personal and business finance platform for the Greek market — solo, end to end: product, architecture, implementation, infrastructure, billing and go-to-market. ~280k LOC across an Nx monorepo, launching Nov 2026.

- Built and shipped an entire multi-tenant finance platform solo — 51-model domain, role-based access control, bilingual (EN/GR) UI — from first commit to production infrastructure.
- Integrated Stripe end to end as merchant of record: 4-tier plans, trials, per-seat billing, downgrade schedules, and idempotent webhook handling that survives retries and partial failures.
- Built a bank-statement import pipeline for the Greek market: six Greek banks, six CSV/XLSX dialects, with column mapping, duplicate and cross-account transfer detection, and a 30-day undo; designed from real statements collected from real users.
- Set the roadmap from user conversations rather than a backlog — pricing, plan limits and the trial model included.
- Owned production: Sentry, structured logging, k6 load testing, and a cross-region latency investigation that set the API's capacity SLO.
- Work daily with AI coding agents on a spec-driven workflow of my own design.

Stack: Angular 22, NgRx SignalStores, RxJS, PrimeNG, Tailwind CSS 4, Transloco, Chart.js | NestJS 11, TypeScript, Prisma, PostgreSQL, OpenAPI, Supabase Auth | Stripe | Jest, Supertest, Playwright, k6 | Nx, pnpm, GitHub Actions, Railway, Docker, Infisical | Sentry, Grafana Loki, PostHog

Calm

City: San Francisco (Remote) | **Country:** United States

[01/07/2022 - 31/12/2024]

Staff Software Engineer

iOS engineer on the Calm Health mobile app (remote).

- Implemented from scratch an iOS application with a custom architecture (MVSSI – Model View Store State Interactor) designed around product needs for scalability and performance.
- Built custom animations, AVPlayer-based media playback, push notifications, deep links, and a REST API client with a caching layer.

Stack: Swift, SwiftUI, AVPlayer, RxJS-style reactive streams, REST

Calm

City: San Francisco (Remote) | **Country:** United States

[01/01/2022 - 30/06/2022]

Full Stack Engineer

- Front end: contributed to Calm's web client apps (Next.js, React, TypeScript, Jest, Karate).
- Back end (03/2022 – 07/2022): implemented from scratch a PDF renderer/generator microservice (Node.js, Go, Docker, GCP, Pub/Sub).

Programize (Greek Government project)

City: Athens | **Country:** Greece

[01/09/2021 - 31/01/2022]

Full Stack Engineer

Greek Government Lumpsum project

In this project, I was called upon to contribute to the transformation of manual calculation processes for lump sum and pension benefits for the Greek engineers' sector into an automated system. This system was developed in vanilla PHP/JS. One of the most significant challenges I was tasked with solving was the need to integrate multiple different databases from smaller sectors into a unified one that would belong to EFKA. Additionally, the old code was isolated, and the necessary parts were replaced in a modularized form to facilitate future modifications or additions. This project was almost entirely under my supervision. My responsibilities included development, QA supervision, creation of test/dev/prod environments, training EFKA staff, as well as the manual deployment to production.

Stack:

- Php
- Vanilla js
- HTML SCSS
- MySQL
- PostgreSQL
- CI/CD
- git
- QA

Greek Army

City: Athens

[01/01/2021 - 30/09/2021]

Full Stack Engineer

At the time working for greek army, more specifically in the project for military hospitals, I was asked to implement a new, microservice type, backend for different LIS systems to exchange medical information based on the HL7 protocol. My main job, though, was Implementing new scalable APIs for a php backend, refactoring old code and finding new solutions on boosting the response times of our server. Also I was asked to contribute implementing a new frontend for the "microservice" I developed, as well as adding new functionalities on the existing one.

Teck Stack:

- React
- Php Symfony

- PostgreSQL
- git
- CI/CD
- automated testing
- nodejs
- Docker

Programize

City: Athens | **Country:** Greece

[01/05/2019 - 31/01/2021]

Software Engineer

Software engineering consultant on client projects.

- Developed a container website from scratch, mobile-first, with a heavy focus on native animations; all CSS effects and animations custom-built (Vue.js, HTML/SCSS, AWS Lambda serverless functions).

Infiot (acquired by Netskope)

City: San Jose, CA | **Country:** United States

[01/07/2019 - 30/09/2020]

Full Stack Engineer

Contributed on the development of a cloud native, big data platform for secure end to end applications and solutions.

** Infiot was acquired by NetSkope in 2022. See more here:

<https://www.netskope.com/press-releases/netskope-acquires-infiot-will-deliver-fully-integrated-single-vendor-sase-platform>

Full stack web developer:

- IoT
- Typescript
- MongoDB
- Redis
- Nodejs - Express
- Angular10
- GraphQL
- Docker
- Google cloud
- Kubernetes
- Jest
- Protractor
- E2E testing
- Unit testing
- Integration Testing

Self-employed (Freelance)

City: Athens | **Country:** Greece

[01/03/2018 - 31/05/2019]

Software Engineer

- Built a full-stack application for a Cypriot athletics coaches' association (ASP.NET, C#, HTML/CSS/JS).
- Built a full-stack application for a brokerage office with custom role- and permission-based authentication/authorisation (NestJS, React, MongoDB).

EDUCATION & TRAINING

[09/2011 - 2018]

Electrical and Computer Engineer

National Technical University of Athens <https://www.ece.ntua.gr/en>

Address: Iroon Polytechniou 915780, Athens (Greece) | **Field(s) of study:** Information and Communication Technologies | **Thesis:** Social Media based Event Detection system, using Natural Language Processing techniques and Machine Learning

MEng, Electrical and Computer Engineering

Activities and societies:

- Engineering Student's European Association (EESTEC)

Concentration fields:

- Computer Software
- Computer Systems
- Telecommunication Systems
- Computer Networks

LANGUAGE SKILLS

Mother tongue(s): Greek

Other language(s):

English

LISTENING: C1 **READING:** C1 **WRITING:** B2

SPOKEN PRODUCTION: B2 **SPOKEN INTERACTION:** B2

SKILLS

HTML, CSS, JavaScript | typescript | NodeJS and ExpressJS | mongoDB | Docker | Git | Angular | Reactjs | VueJS | Python | PHP | MySQL | IOS (Objective-C, Swift) | SwiftUI | NestJS | RxJS / NgRx | PostgreSQL | Snowflake | Prisma ORM | AWS (Lambda, SQS) | Kubernetes | Terraform | CI/CD (GitLab CI, GitHub Actions) | Mapbox GL / deck.gl | LLM integration (OpenAI API) | Stripe Billing | Testing (Jest, Playwright, k6) | Next.js | Go | Software Architecture

DRIVING LICENCE

Motorbikes: A2

Cars: B
